

## Case Study 1

### Project Description

In this project we are trying to analyse the given dataset and draw key insights from it. I am given data for job\_data table. Which is having column like job\_id,actor\_id,language,event,time spent,organization, and ds i.e date

### Approach

The csv data sample were given. I have created the dataset then I have created the tables. Then I have loaded data from the csv files.

```
3 • CREATE TABLE job_data1 (  
4     ds VARCHAR(30) ,  
5     job_id int ,  
6     actor_id int,  
7     event VARCHAR(30),  
8     language VARCHAR(30) ,  
9     time_spent int,  
10    org VARCHAR(10)  
11 );  
12  
13 • LOAD DATA INFILE 'E:\\TrainityAssignments\\job_1.csv'  
14 INTO TABLE job_data1  
15 FIELDS TERMINATED BY ','  
16 ENCLOSED BY ''''  
17 LINES TERMINATED BY '\\n'  
18 IGNORE 1 LINES;  
19
```

I was having some issues loading the fields related to date fields so I had to take date fields as varchar

### Tech-Stack Used

MySQL Server as the database, MySQL WORKBENCH as a query editor.  
G-Drive to upload the assignment.

## Insights

### 1. Number of jobs reviewed: Amount of jobs reviewed over time.

Your task: Calculate the number of jobs reviewed per hour per day for November 2020?

```
with cte1 as(
select * from job_data1 where month(str_to_date(ds,'%d-%m-%Y'))=11 and year(str_to_date(ds,'%d-%m-%Y'))=2020)
select
(select count(*) from cte1)*1.0/(30*24) as 'jobs reviewed per hour'
```

The screenshot shows a SQL query editor with the following code:

```
6 with cte1 as(
7 select * from job_data1 where month(str_to_date(ds,'%d-%m-%Y'))=11 and year(str_to_date(ds,'%d-%m-%Y'))=2020)
8 select
9 (select count(*) from cte1)*1.0/(30*24) as 'jobs reviewed per hour'
10
```

Below the editor is a 'Result Grid' with the following data:

| jobs reviewed per hour |
|------------------------|
| 0.06111                |

### 2. 7 day rolling average.

Your task: Let's say the above metric is called throughput.

Calculate 7 day rolling average of throughput? For throughput, do you prefer daily metric or 7-day rolling and why?==> **According to me 7day rolling average is preferred as it gives more realistic results**

```
with cte1 as(
select str_to_date(ds,'%d-%m-%Y') as ds,count(*) as events_per_day from job_data1 group by
str_to_date(ds,'%d-%m-%Y') order by str_to_date(ds,'%d-%m-%Y') asc)
select *,avg(events_per_day) OVER (ORDER BY ds ROWS BETWEEN 6 PRECEDING AND
CURRENT ROW) as _7_day_rolling_Avg from cte1
```

The screenshot shows a SQL query editor with the following code:

```
16 with cte1 as(
17 select str_to_date(ds,'%d-%m-%Y') as ds,count(*) as events_per_day
18 from job_data1 group by str_to_date(ds,'%d-%m-%Y') order by str_to_date(ds,'%d-%m-%Y') asc)
19 select *,avg(events_per_day) OVER (ORDER BY ds ROWS BETWEEN 6 PRECEDING AND CURRENT ROW) as _7_day_rolling_Avg from cte1
20
```

Below the editor is a 'Result Grid' with the following data:

| ds         | events_per_day | _7_day_rolling_Avg |
|------------|----------------|--------------------|
| 2019-08-05 | 1              | 1.0000             |
| 2019-08-06 | 1              | 1.0000             |
| 2019-08-07 | 1              | 1.0000             |
| 2019-08-08 | 1              | 1.0000             |
| 2020-10-31 | 1              | 1.0000             |
| 2020-11-01 | 1              | 1.0000             |
| 2020-11-02 | 1              | 1.0000             |
| 2020-11-03 | 1              | 1.0000             |
| 2020-11-04 | 2              | 1.1429             |
| 2020-11-05 | 1              | 1.1429             |
| 2020-11-06 | 2              | 1.2857             |
| 2020-11-07 | 1              | 1.2857             |
| 2020-11-08 | 1              | 1.2857             |
| 2020-11-09 | 1              | 1.2857             |
| 2020-11-10 | 1              | 1.2857             |
| 2020-11-11 | 1              | 1.1429             |
| 2020-11-12 | 3              | 1.4286             |
| 2020-11-13 | 1              | 1.2857             |

7dayRollingAvg.csv

### 3. /Percentage share of each language: Share of each language for different contents.

Your task: Calculate the percentage share of each language in the last 30 days?

#Query for specific Nov 2020

```
with cte1 as(
select language,
       count(*) as tc
from job_data1
where month(str_to_date(ds,'%d-%m-%Y'))=11 and year(str_to_date(ds,'%d-%m-%Y'))=2020
group by language)
select *,
       sum(tc) over() as sum,
       round(100*tc/sum(tc) over(),2) as per_total
from cte1
```

```
21  /*Percentage share of each language: Share of each language for different contents.
22  Your task: Calculate the percentage share of each language in the last 30 days?*/
23
24  #Query for specific Nov 2020
25
26  with cte1 as(
27  select language,
28         count(*) as tc
29  from job_data1
30  where month(str_to_date(ds,'%d-%m-%Y'))=11 and year(str_to_date(ds,'%d-%m-%Y'))=2020
31  group by language)
32  select *,
33         sum(tc) over() as sum,
34         round(100*tc/sum(tc) over(),2) as per_total
35  from cte1
36
37
```

<

Result Grid | Filter Rows: | Export: | Wrap Cell Content: |

|   | language | tc | sum | per_total |
|---|----------|----|-----|-----------|
| ▶ | English  | 7  | 44  | 15.91     |
|   | Arabic   | 11 | 44  | 25.00     |
|   | Persian  | 13 | 44  | 29.55     |
|   | Hindi    | 3  | 44  | 6.82      |
|   | French   | 5  | 44  | 11.36     |
|   | Italian  | 5  | 44  | 11.36     |

Result 83

#### 4. Duplicate rows: Rows that have the same value present in them.

Your task: Let's say you see some duplicate rows in the data. How will you display duplicates from the table?

##### Case 1

here I am assuming job\_id as the duplicate parameter and the one got created earlier is the original data

```
with temp1 as (
```

```
select *,
```

```
    row_number() over(partition by job_id order by str_to_date(ds,'%d-%m-%Y') asc ) as rn  
from job_data1 )
```

```
select * from temp1 where rn>1
```

```
39  /*Duplicate rows: Rows that have the same value present in them.  
40  Your task: Let's say you see some duplicate rows in the data. How will you display duplicates from the table?*/  
41  #Case 1  
42  #here I am assuming job_id as the duplicate parameter and the one got created earlier is the original data  
43  with temp1 as (  
44  select *,row_number() over(partition by job_id order by str_to_date(ds,'%d-%m-%Y') asc ) as rn from job_data1 )  
45  select * from temp1 where rn>1
```

| ds         | job_id | actor_id | event    | language | time_spent | org | rn |
|------------|--------|----------|----------|----------|------------|-----|----|
| 18-11-2020 | 8      | 1003     | transfer | Persian  | 104        | A   | 2  |

Result 84 x

##### Case 2

If we want to find the whole row then

```
select ds,job_id,actor_id,event,language,time_spent,org,COUNT(*)
```

```
from job_data1
```

```
group by ds,job_id,actor_id,event,language,time_spent,org
```

```
having count(*) > 1
```

```

47 #Case2
48 # If we want to find the whole row then
49 select ds,job_id,actor_id,event,language,time_spent,org,COUNT(*)
50 from job_data1
51 group by ds,job_id,actor_id,event,language,time_spent,org
52 having count(*) > 1
53
54

```

| ds         | job_id | actor_id | event    | language | time_spent | org | COUNT(*) |
|------------|--------|----------|----------|----------|------------|-----|----------|
| 29-11-2020 | 23     | 1003     | decision | Persian  | 20         | C   | 2        |

Result:

1. I was able to create meaningful insights from the dataset which can be crucial for business. I was able to sharpen my SQL skills from here. Successfully completing this project boosted my confidence.
2. Created the database from scratch, created dataset
3. Wrote many complex queries. Faced many issues like I was not able to load the date fields so had to change the data type and load data then had to convert the string to date filed in each time
